IMAP AT A GLANCE

ONE CALL CONCEPTS
When safety is on the line.

IMAP

Here's a quick rundown of how **IMAP** is used to help get Facility Operators notified quickly and accurately.

After the new **DATABASE POLYGON** has been added to the database maps, Prism works with this new information so when a **NOTIFICATION POLYGON** is drawn in the area near the newly added facility, the user is directly informed.

Prism's map interface, showing a **NOTIFICATION POLYGON** being drawn

Here, you can see the **NOTIFICATION POLYGON** covers a portion of the new database polygon that was added by the user. Now that the user has successfully added the database polygon to the map, Prism will automatically notify the user.
After logging into the **IMAP** system, the user adds a **DATABASE POLYGON** into the base map showing the whereabouts of a particular facility. This process allows them to be notified when work is being done near this area, through OCC's PRISM technology.

New polygon being added to database by the user.

The user wants to create a **new DATABASE POLYGON** within the base map for future notifications for a specific area(s) - **They log in to IMAP.**

Existing database polygons already 'in' our database system.
